

Claude artifacts: build, test, change and share a small tool

An artifact is a working tool Claude builds in a panel beside the chat, like a price calculator you can click, test and share. Bright Path Landscaping is a made-up company and its prices are samples.

Ask for it

1. Start a new chat and describe the tool: who it's for, what they enter, what it shows.
2. Give every real price and rule in the message. Claude does the building.
3. Add "Show how the price is worked out" so you can check each result.
4. No artifact? Turn on **Code execution and file creation** in **Settings > Capabilities**.

Test it like a customer

Check one

8,000 sq ft of Aeration: $\$40 + \$8 \times 8 = \$104$.

Check another

Fertilizing: $\$35 + \$5 \times 8 = \$75$.

Expand

The expand button at the top right shows it full page. **Chat** brings the conversation back.

Change one thing, in the same chat

Add a Number of visits box. Take 10% off at 10 visits or more. Keep everything else the same.

Claude updates the same artifact. Test it: $26 \text{ visits} \times \$49 = \$1,274$, minus $\$127.40 = \$1,146.60$.

Share and find it again

- Artifacts start **private**. Click **Share**, then under **General access** change **Only you** to **Anyone with the link**, then **Copy link**.
- Anthropic's help center says viewers need a Claude account, so open the link in a private window first.
- Older artifacts show **Publish** instead: it gives a public link.
- The artifact's name opens **Export**, **Rename** and **Duplicate**. Everything is saved in **Artifacts** in the sidebar.

Remember: Put your real numbers in the prompt and test two or three results by hand before anyone else sees the tool.
